LAB 0 :

1.What is SQL and its Use?

- SQL stands for **Structured Query Language**.
- SQL is a standard language used for **accessing and manipulating data in databases**.
- SQL is primarily used with **Relational Database Management Systems (RDBMS)**.
- SQL allows users to **create, modify, retrieve, and manage data** in a database.
- It is used to **create and manage database objects**, such as tables and views.
- SQL also provides commands for **controlling user access and managing transactions**.
- SQL acts as a communication interface between **software applications and database management systems**.

2. Describe all the different commands of SQL, mention use of it and syntax.

1.DDL - Data Definition Language

1. CREATE

- USE - create database or its objects.
- SYNTAX -
- CREATE TABLE

Table_name(column1 data_type , column2 data_type);

2. DROP

- USE - delete objects from the database.
- SYNTAX - DROP TABLE table_name;

3. ALTER

- USE - alter the structure of the database.
- SYNTAX - ALTER TABLE table_name ADD COLUMN column_name data_type;

4. TRUNCATE

- USE - Remove all the records from a table, including all spaces allocated for the records are removed.
- SYNTAX - TRUNCATE TABLE table_name;

5. COMMENT

- USE - Add comments to the data dictionary.

6. RENAME

- USE - Rename an object existing in the database.
- SYNTAX - RENAME TABLE old_table_name TO new_table_name;

2. DQL - DATA QUERY LANGUAGE

1. SELECT

- USE - It is used to retrieve data from the database
- SYNTAX - SELECT column1, column2, ... FROM table_name WHERE condition;

2. FROM

- USE - Indicates the table from which to retrieve the data.
- SYNTAX - SELECT column1 FROM table_name;

3. WHERE

- USE - Filters rows before any grouping or aggregation
- SYNTAX -

SELECT column1

FROM table_name

WHERE condition;

4. GROUP BY

- USE - Groups rows that have the same values in specified columns.

- SYNTAX- SELECT column1, AVG(column2)

FROM table_name

GROUP BY column1;

3. DML - Data Manipulation Language

1. INSERT

- USE-Insert data into a table
- SYNTAX-INSERT INTO table_name (column1, column2, ...) VALUES (value1, value2, ...);

2. UPDATE

- USE -Update existing data within a table
- SYNTAX-UPDATE table_name SET column1 = value1, column2 = value2 WHERE condition;

3. DELETE

- USE - Delete records from a database table
- SYNTAX-DELETE FROM table_name WHERE condition;

4. DCL - Data Control Language

1. GRANT

- USE -Assigns new privileges to a user account, allowing access to specific database objects, actions or functions
- SYNTAX-GRANT privilege_type [(column_list)] ON [object_type] object_name TO user [WITH GRANT OPTION];

2.REVOKE

- USE - Removes previously granted privileges from a user account, taking away their access to certain database objects or actions
- SYNTAX-REVOKE [GRANT OPTION FOR] privilege_type [(column_list)] ON [object_type] object_name FROM user [CASCADE];

5. TCL - Transaction Control Language

1. BEGIN TRANSACTION

- USE -Starts a new transaction
- SYNTAX-BEGIN TRANSACTION [transaction_name];

2. COMMIT

- USE- Saves all changes made during the transaction
- SYNTAX-COMMIT;

3. ROLLBACK

- USE- Undoes all changes made during the transaction
- SYNTAX- ROLLBACK;

4. SAVEPOINT

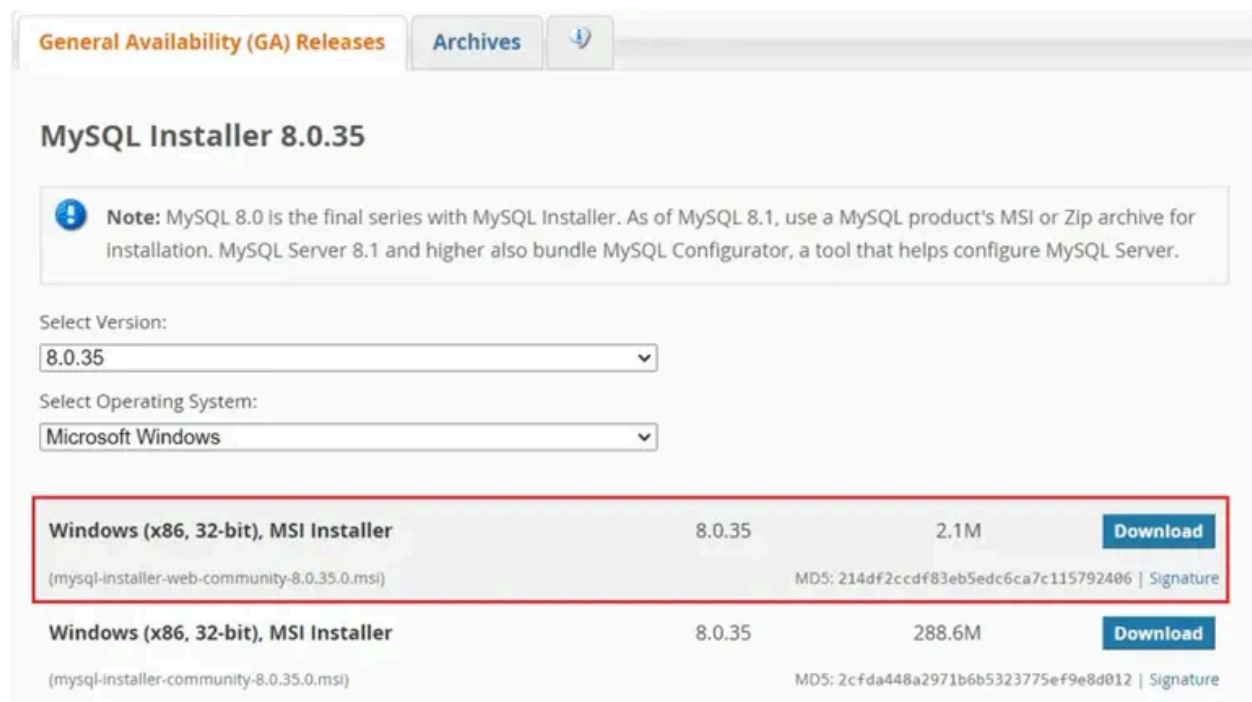

- USE- Creates a savepoint within the current transaction
- SYNTAX-SAVEPOINT savepoint_name;

1. Write a step by step procedure to install MYSQL.

Step 1: Visit the Official MySQL Website

Open your preferred web browser and navigate to the official MySQL website. Download MySQL Installer for Windows from the official MySQL website. .

General Availability (GA) Releases | Archives | 

MySQL Installer 8.0.35

 **Note:** MySQL 8.0 is the final series with MySQL Installer. As of MySQL 8.1, use a MySQL product's MSI or Zip archive for installation. MySQL Server 8.1 and higher also bundle MySQL Configurator, a tool that helps configure MySQL Server.

No thanks, just start my download.

Step 3: Run the Installer

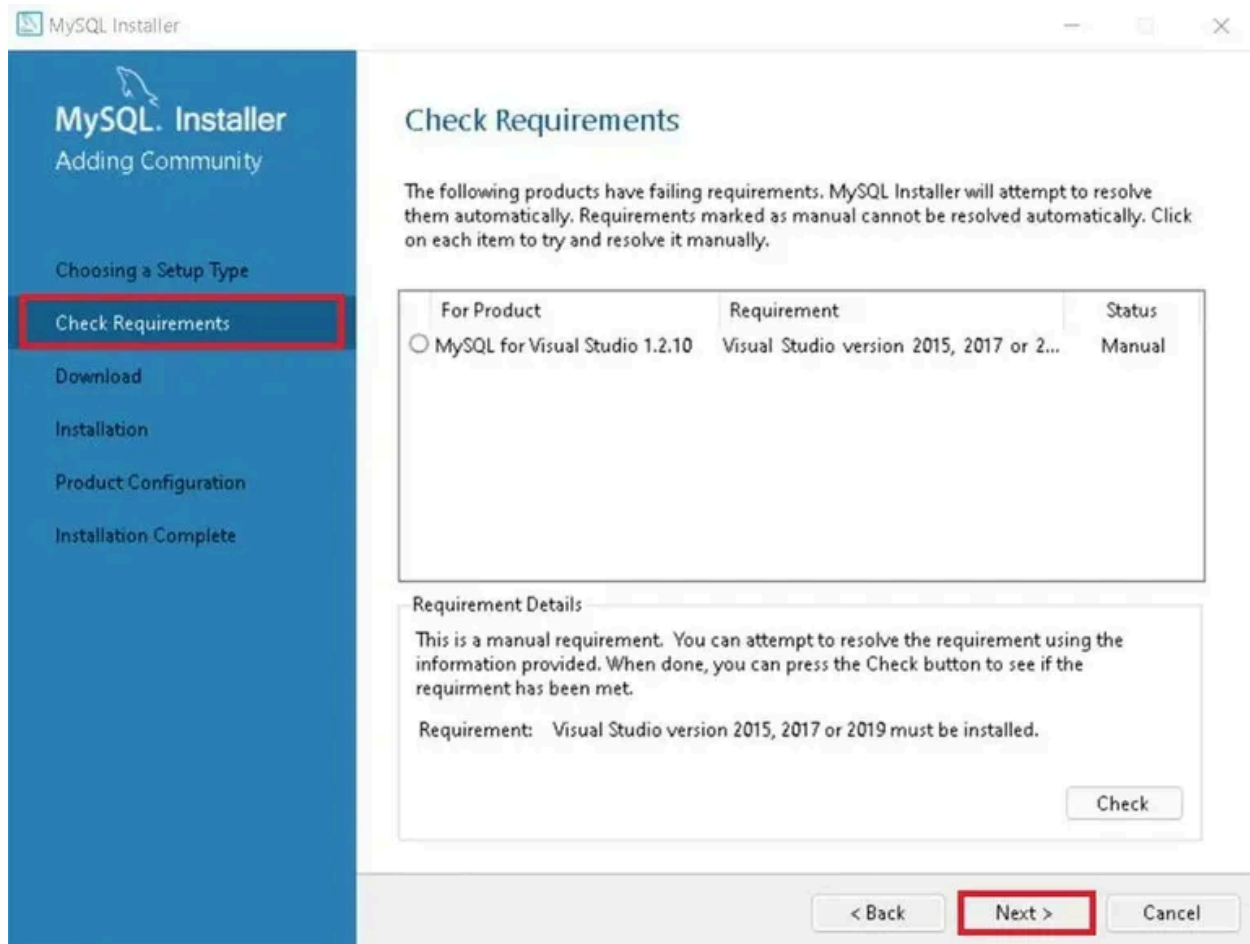

After downloading the MySQL installer (.exe file), go to your Downloads folder, find the file and double-click to run the installer

Step 4: Choose Setup Type

The installer will instruct you to choose the setup type. For most users, the "Developer Default" is suitable. It includes MySQL Server, MySQL Workbench, and other development tools. Click "Next" to proceed.

Step 5: Check Requirements

The installer will check for required dependencies such as the Microsoft Visual C++ Redistributable. It may automatically resolve missing components, but in some cases, manual installation may be required.

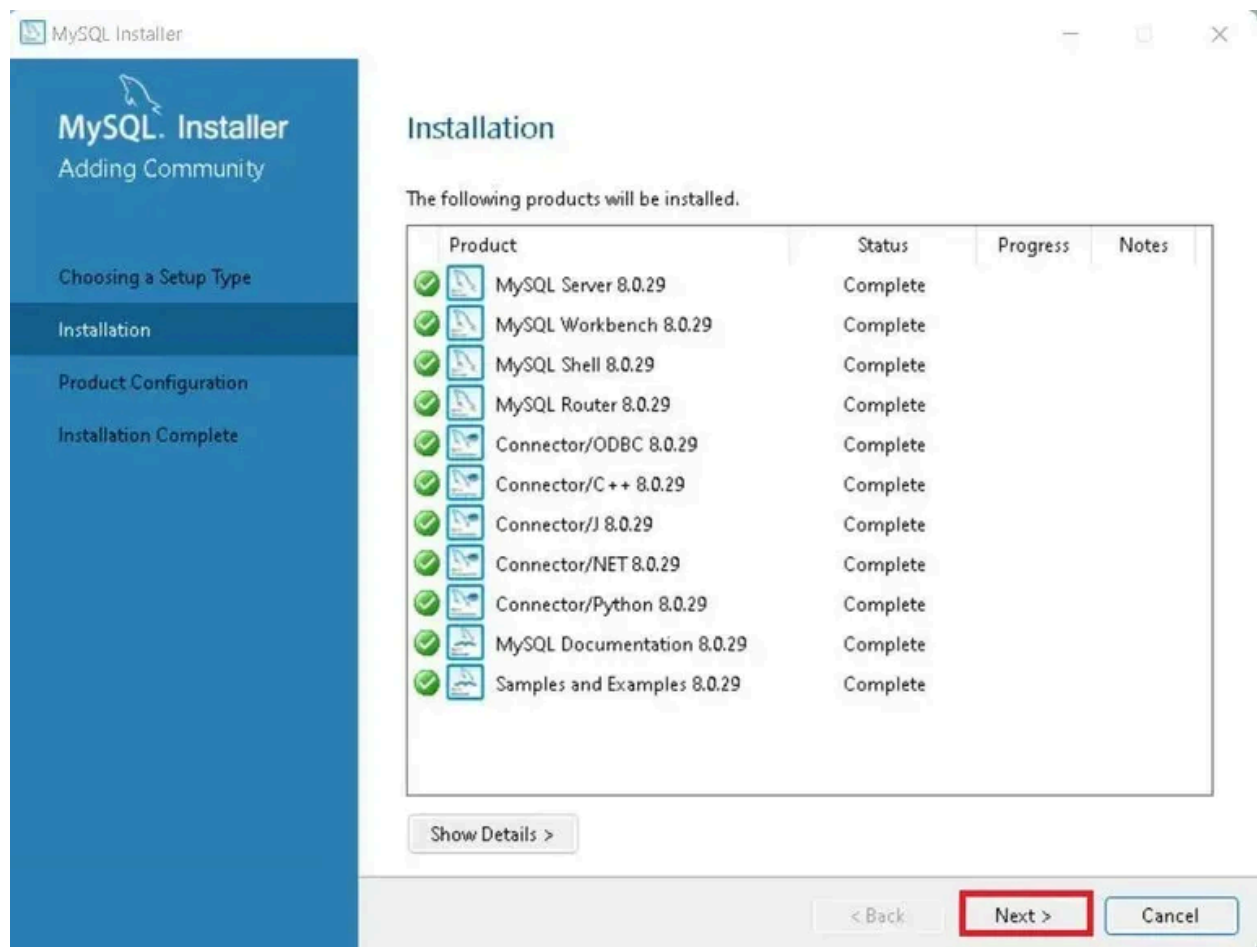

Step 6: MySQL Downloading

Now that you're in the download section, click "Execute" to start downloading the components you selected. . MySQL Server, MySQL Workbench, and other required components will be downloaded .Wait a

few minutes until all items show tick marks, indicating completion, before moving forward.

Step 7: MySQL Installation

Now the downloaded components will be installed. Click "Execute" to start the installation process. MySQL will be installed on your Windows system. Then click Next to proceed.

Step 8: Navigate to Few Configuration Pages

Proceed to "Product Configuration" > "Type and Networking" > "Authentication Method" Pages by clicking the "Next" button.

Step 9: Create MySQL Accounts

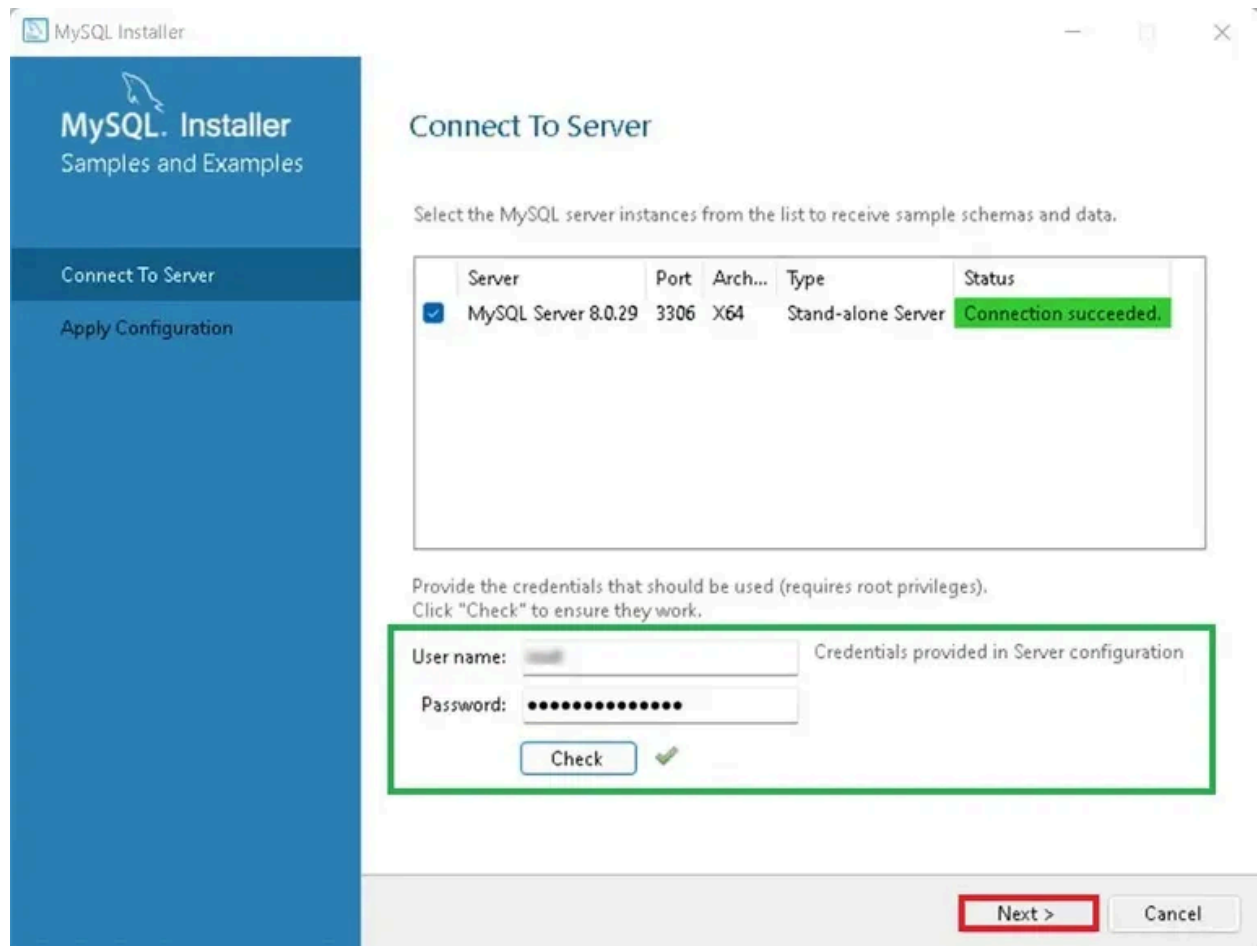

Create a password for the MySQL root user. Ensure it's strong and memorable. Click "Next" to proceed.

The screenshot shows the MySQL Installer window for MySQL Server 8.0.29. The left sidebar contains the following steps: Type and Networking, Authentication Method, Accounts and Roles (highlighted), Windows Service, and Apply Configuration. The main area is titled 'Accounts and Roles' and contains two sections. The first section, 'Root Account Password', prompts the user to enter a password for the root account, with a note to store it securely. It includes input fields for 'MySQL Root Password' and 'Repeat Password', both masked with dots. Below these fields, the 'Password strength' is indicated as 'Strong'. The second section, 'MySQL User Accounts', provides instructions to create user accounts and assign roles. It features a table with columns for 'MySQL User Name', 'Host', and 'User Role'. To the right of the table are buttons for 'Add User', 'Edit User', and 'Delete'. At the bottom of the window, there are three buttons: '< Back', 'Next >' (which is highlighted with a red rectangle), and 'Cancel'.

MySQL User Name	Host	User Role
-----------------	------	-----------

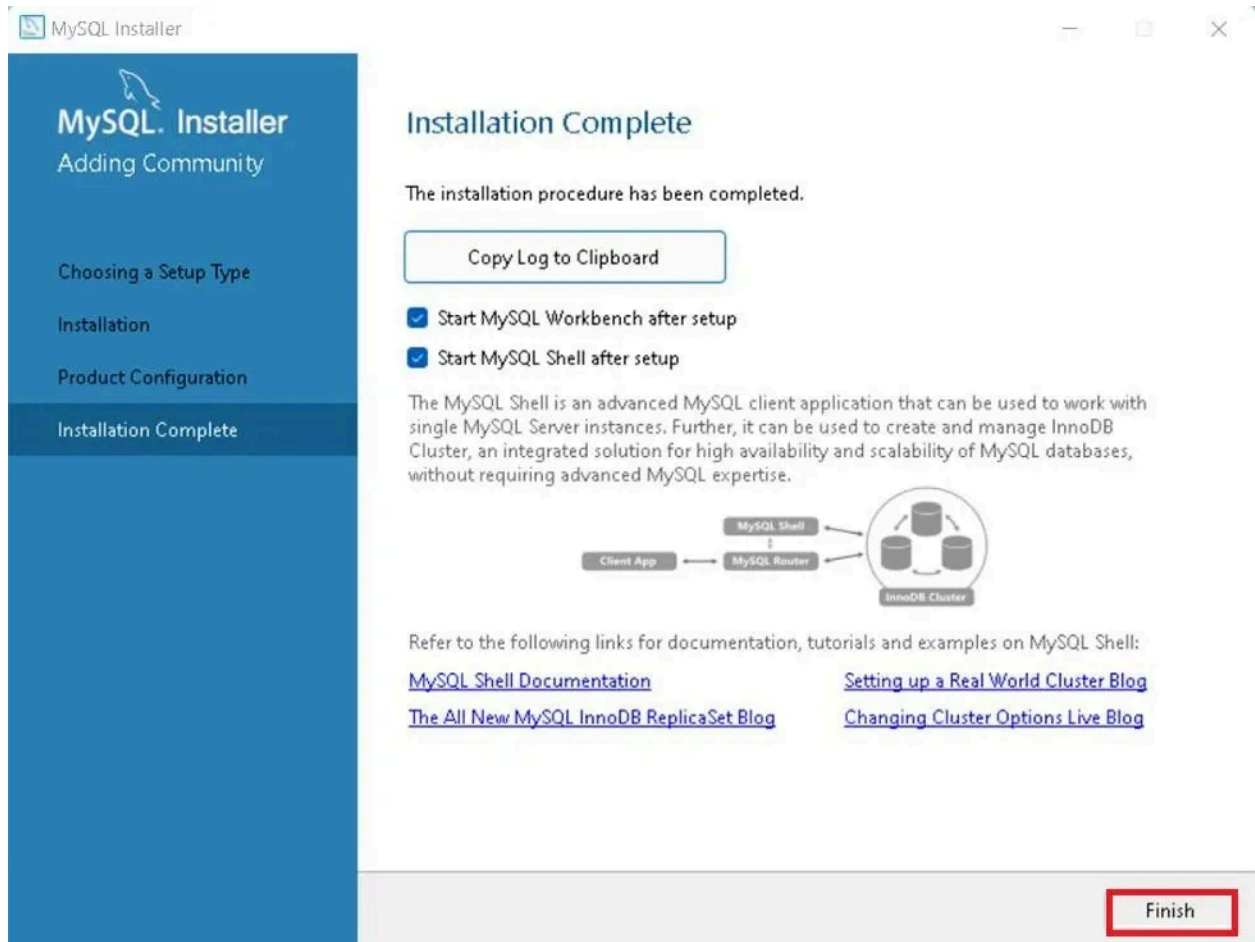

Step 10: Connect To Server

Enter the root password, click Check. If it says "Connection succeed," you have successfully connected to the server.

Step 11: Complete Installation

Once the installation is complete, click "Finish." Congratulations! MySQL is now installed on your Windows system.

Step 12: Verify Installation

To ensure a successful installation of MySQL, open MySQL Workbench or the MySQL Command Line Client, both available in your Start Menu. Log in using the root user credentials you set during installation. If the connection is successful, MySQL and MySQL Workbench have been installed correctly.
